EXPERIENCE

Seasia Infotech

Frontend + Backend Developer

Mohali 2022 - Present

As a MERN Stack Developer at Seasia Infotech, I have been involved in designing, developing, and maintaining full-stack web applications using modern technologies.

- Developed and maintained full-stack web applications using MongoDB, Express.js, React.js, and Node.js.
- Created reusable front-end components and optimized UI/UX using React.js and Tailwind CSS.
- Used Git and GitHub for version control and JIRA for task tracking in an Agile environment.
- Collaborated with QA teams to ensure application stability and performance.

SUMMARY

MERN Stack Developer with 4 years of experience in building full-stack web applications using MongoDB, Express.js, React.js, Node.js, Vue js. Skilled in creating user-friendly interfaces, writing clean backend code, and building RESTful APIs. Experienced in working with Git, managing databases, and deploying apps on cloud platforms like AWS and staging servers.Comfortable working in teams, following Agile methods, and solving real-world problems with efficient code.

PROJECTS

EBMCI

Mohali

Developed dynamic and interactive frontend interfaces for the EBMCI platform, focusing on two key modules: Device TrandAI, Device Comply AI and Admin panel. Leveraged React.js and Redux to create responsive, data-driven components that streamline the management of medical device data

- Developed interactive dashboards for Device TrandAI and Device Comply AI, integrating RESTful APIs, multi-step forms, and PDF generation features.
- Implemented a smart chatbot for guided navigation and enhanced user assistance.
- Enabled advanced multi-field search, printable reports, and a watchlist feature with historical tracking for medical devices.
- Added a chatbot for enhanced user support and guided navigation.

Slim snap

Mohali

Engineered a robust and scalable backend for Slim Snap, a health and wellness application. Combined traditional backend development using Node.js and Express.js with advanced AI capabilities via OpenAI APIs to deliver personalized nutrition insights and chatbot experiences.

- Designed and developed scalable RESTful APIs using Node.js and Express.js, supporting high-volume application workflows and improving response times through endpoint optimization.
- Implemented a real-time one-to-one chat system using Socket.IO, enabling low-latency messaging and enhancing user engagement.
- Integrated the SongStats third-party platform to enable seamless external data synchronization and extend platform capabilities.
- Built secure authentication, authorization, and role-based access control (RBAC) mechanisms to protect application resources.
- Designed and managed database schemas and queries to ensure efficient data storage and retrieval.
- Implemented error handling, logging, and validation mechanisms to improve system reliability and production stability.
- Collaborated with frontend developers to ensure smooth API integration and efficient data exchange.
- Supported QA testing cycles, troubleshooting issues, and resolving defects to ensure stable production releases.

PROJECTS

Recircle

Mohali

Developed and maintained backend services for the **Recircle** platform using **Node.js and Express.js**, building scalable RESTful APIs to support core application workflows. Integrated third-party services such as **DocuSign** to extend platform capabilities and enable secure document processing. Implemented authentication, authorization, and role-based access control to ensure secure access to system resources. Managed database schema design and operations for efficient data handling while maintaining production stability through validation, error logging, and performance optimization. Collaborated with frontend teams, participated in code reviews, and supported QA cycles to diagnose and resolve issues for reliable production releases.

- Developed scalable RESTful APIs using Node.js and Express.js to support core application workflows.
- Integrated DocuSign third-party services to enable secure document processing and extend platform functionality.
- Implemented authentication, authorization, and role-based access control (RBAC) while managing database schemas for efficient data storage and retrieval.
- Collaborated with frontend, QA teams, and participated in code reviews to ensure smooth API integration and stable production releases.

EPIQ

Mohali

Developed scalable backend services for the **EPIQ** platform using **Node.js and Express.js**, building and optimizing RESTful APIs to support high-volume workflows. Implemented a real-time one-to-one chat module with **Socket.IO** and integrated the **SongStats** platform for external data synchronization. Managed database operations, authentication, authorization, and role-based access control while ensuring production stability through validation, logging, and performance tuning in collaboration with frontend and QA teams.

- Developed scalable backend services using Node.js and Express.js, building and optimizing RESTful APIs to support high-volume application workflows.
- Implemented a real-time one-to-one chat system using Socket.IO, improving messaging performance and user engagement.
- Integrated the SongStats third-party platform to enable seamless external data synchronization and extend platform functionality.
- Managed database operations, schema design, authentication, authorization, and role-based access control (RBAC) for secure and efficient data handling.
- Maintained production stability through validation, error logging, monitoring, and performance tuning, while collaborating with frontend and QA teams for smooth releases.
- Designed and implemented caching strategies and query optimization to reduce API response times and improve system scalability.
- Developed unit and integration tests to ensure code reliability and facilitate faster, safer deployments.
- Documented APIs and backend workflows for team collaboration and onboarding of new developers.
- Participated in architecture planning, helping define best practices for scalable and maintainable backend systems.
- Implemented role-based notifications and event-driven workflows to enhance user experience and system responsiveness.

PROJECTS

Vedavida

Mohali

Worked as a **Full Stack Developer and Team Lead** on the **Vedavida** platform, developing both frontend and backend systems. Built dynamic user and admin panels using **React.js** with **Redux** for efficient state management. Developed backend services using **Node.js and Express.js** and integrated the **Stripe** payment gateway for secure online transactions. Designed and optimized RESTful APIs and managed **MongoDB** database operations for efficient data handling. Led a team of developers, providing technical guidance, code reviews, and ensuring smooth project delivery

- Developed user and admin panels using React.js and Redux, creating responsive and data-driven interfaces.
- Built scalable backend services using Node.js and Express.js and integrated the Stripe payment gateway for secure payments.
- Designed and optimized RESTful APIs and managed MongoDB database operations for efficient data storage and retrieval.
- Led a team of developers, conducting code reviews, resolving technical issues, and ensuring best development practices.
